

# TARANA

## TECHNICAL

# TRAINING

Tarana technical training prepares installers, administrators, and NOC team members to deploy and manage a Tarana G1 network with hands-on labs. Two courses with online accreditation exams are provided, one per day: the Tarana G1 Installer and Tarana TCS Administrator Certificates.

Class structure allows time for Q&A, an online Tarana training portal overview, and a review before the certification exams.

What's required?

Students will need a laptop with admin rights (to change IP addresses) and an ethernet port or adapter.

## DAY 1

Students completing this course and the online exam earn the Tarana G1 Installer Certificate.

- G1 Installation Course
- Base Node Initial Configuration and Labs
- Base Node Installation
- Base Node Verification and Labs
- Remote Node Installation
- Remote Node Configuration, Verification, and Labs
- TCS Operations and Administration Course
- Navigating TCS
- Using the Dashboard and Map

## DAY 2

Students completing this course and the online exam earn the Tarana TCS Administrator Certificate.

- Manage Individual Devices
- Understanding Performance Metrics
- Managing Alarms and Events
- TCS Management
- Network Configuration
- User Management
- Software Upgrades
- Alarm Reporting
- Troubleshooting
- VLANs
